  BA, Political Science, 2015

Dissertation Project

Online Group Identity, Persuasion, and Correcting Misinformation (Book)
Committee: Margit Tavits (Chair), Jacob Montgomery, Christopher Lucas

Job Market Paper: Online Ingroup Bias Helps Correct Misinformation [Latest Version]
  Abstract: The spread of misinformation, especially within online clusters of like-minded individuals, poses a critical threat to democracies, increasingly leading to radicalization and mobilized violence worldwide. How can we dispel misinformation within online groups? Extending social identity theory to the virtual community, I argue that corrections from ingroup peers within online communities can reduce misperceptions and do so more effectively than corrections from other sources. Using three original studies from South Korea, I provide observational and experimental evidence that confirms the prevalence of peer corrections, the existence of bias in favor of online ingroup, and the effectiveness of ingroup peer corrections in reducing misperceptions. These results highlight the importance of leveraging online social identities to correct misinformation, offering a potentially scalable solution to combat misinformation in the digital age. This study contributes to our understanding of digital publics and their effects on attitude change and persuasion.
